Strategy:

- **install poetry on this computer using install-script**
  - TODO documnt steps here

`curl -sSL https://install.python-poetry.org | python3 -`

- **create pyproject.toml on pysunnoaa**
  - TODO document how
- **move data from requirements.txt and requirements\_dev.txt**
  - TODO document how
- **install pyproject.toml data into virtualenv**
  - TODO document how

hmmmm. how do you know this worked?

- **have simple data in requirements.txt and requirements\_dev.txt**
  - **requirements.txt**
    - \* epconversions
  - **requirements\_dev.txt**
    - \* tinynumpy
- **make virtual env trypoeetry**
  - alter use poetry to make the file
-
